ServiceNow Certified Application Developer

SmartInternz

Project Title

Employee Raise Issue Management

Name : Mangamuri Revathi

College : Chalapathi Institute of Engineering and Technology

Email : y23cse108chalapathiengg.ac.in

Project overview

The **Employee Raise Issue Management in ServiceNow project** focuses on simplifying and managing employee-raised issues within an organization.

Employees can submit their issues through a **self-service interface**, and the issues can be assigned to the appropriate team for resolution. The system helps in **tracking issue status, managing requests, and providing better visibility** to employees, managers, and HR teams.

It helps improve communication, reduce delays, and ensure that employee issues are handled efficiently.

7. Conclusion

1. Introduction

Modern organizations need an efficient way to handle employee-raised issues and requests. As the number of employees increases, managing issues manually can lead to delays, repeated follow-ups, communication gaps, and difficulty in tracking the status of each issue.

To address these challenges, the **Employee Raise Issue Management in ServiceNow** project provides a structured solution for managing employee-raised issues. The system allows employees to submit their issues through a **self-service interface** and enables the responsible teams to review, assign, track, and resolve them.

The system provides better visibility into the issue lifecycle and helps employees and management track the progress of submitted issues. This improves communication, reduces delays, and ensures that employee issues are handled in an organized manner.

The project demonstrates how ServiceNow can be used to manage employee issues and requests through a centralized and user-friendly platform.

2. Project Objectives

The main objective of the **Employee Raise Issue Management in ServiceNow** project is to develop a structured system for managing employee-raised issues. The project aims to simplify issue submission, improve issue tracking, and ensure that issues are assigned to the appropriate team for resolution.

The system allows employees to raise issues through a self-service interface. Based on the issue details, the concerned team can review the issue, assign it to the appropriate person, update its status, and resolve it.

The key objectives of the project are:

- To provide employees with an easy way to raise issues.
- To reduce manual effort in managing employee issues.
- To assign employee issues to the appropriate team or person.
- To provide issue status updates and tracking.
- To improve communication between employees and support teams.
- To reduce delays in resolving employee-raised issues.
- To provide better visibility into the issue resolution process.

3. Key Features

Employee Self-Service: Employees can easily submit their issues through the ServiceNow interface.

- **Issue Management:** The system stores and manages employee-raised issues in a centralized location.
- **Issue Assignment:** I;////';;;///////// //// Llllll ?/ssues can be assigned to the appropriate team or responsible person.
- **Status Tracking:** Employees and support teams can track the current status of an issue.
- **Issue Updates:** Support teams can update issue details, progress, and resolution information.

4. ServiceNow Developer Setup:

Access the ServiceNow Developer Portal

1.Go to the **ServiceNow Developer Portal** and create a free developer account.

2. Sign up using your required details. After registration, a **verification email** will be sent to your registered email ID. Complete the verification process to access the Developer Portal.

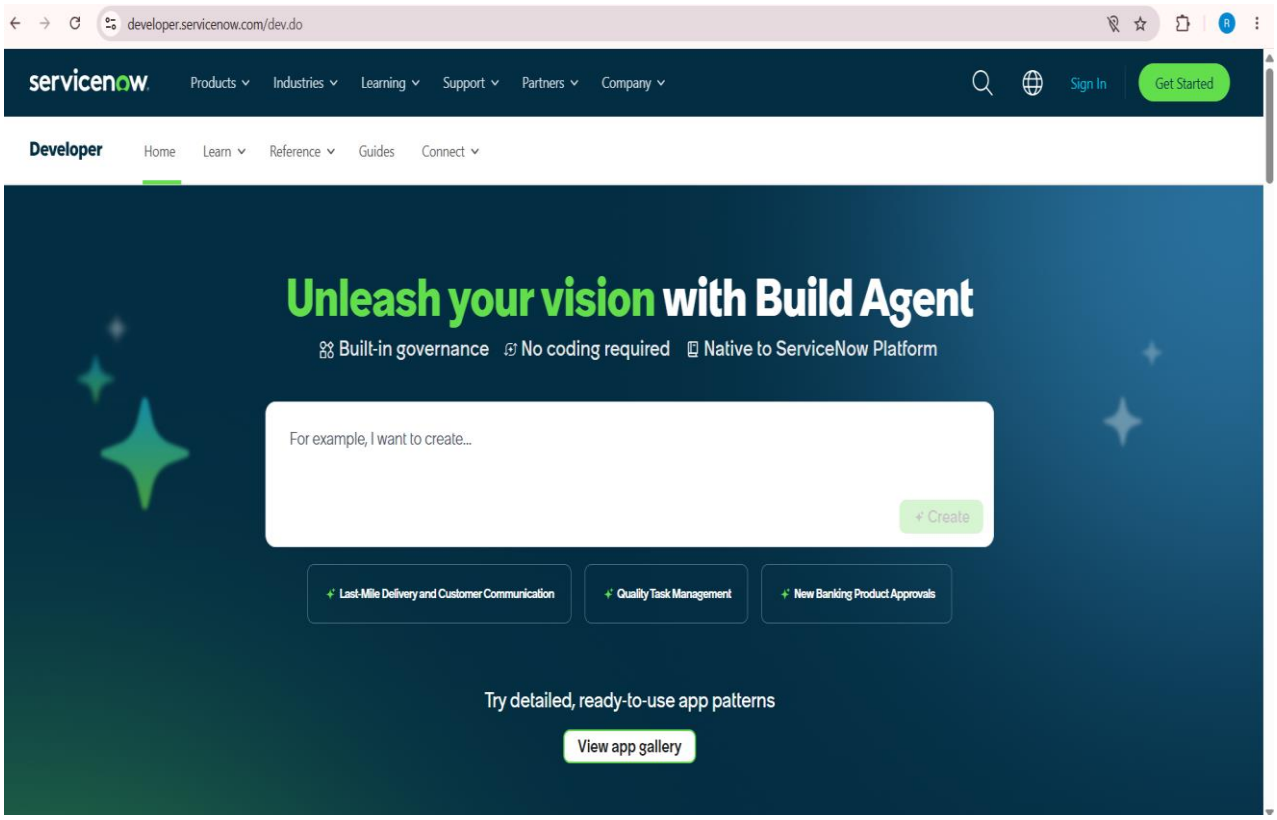

3. After verification, the **ServiceNow Developer Portal Home Page** will appear. Click on **Start Building** to access the development options.

4. Request a **Personal Developer Instance (PDI)** to develop and test the **Employee Raise Issue Management** project.

5. After receiving the instance, log in to the ServiceNow instance and use the available development tools to create and manage the employee issue management features.

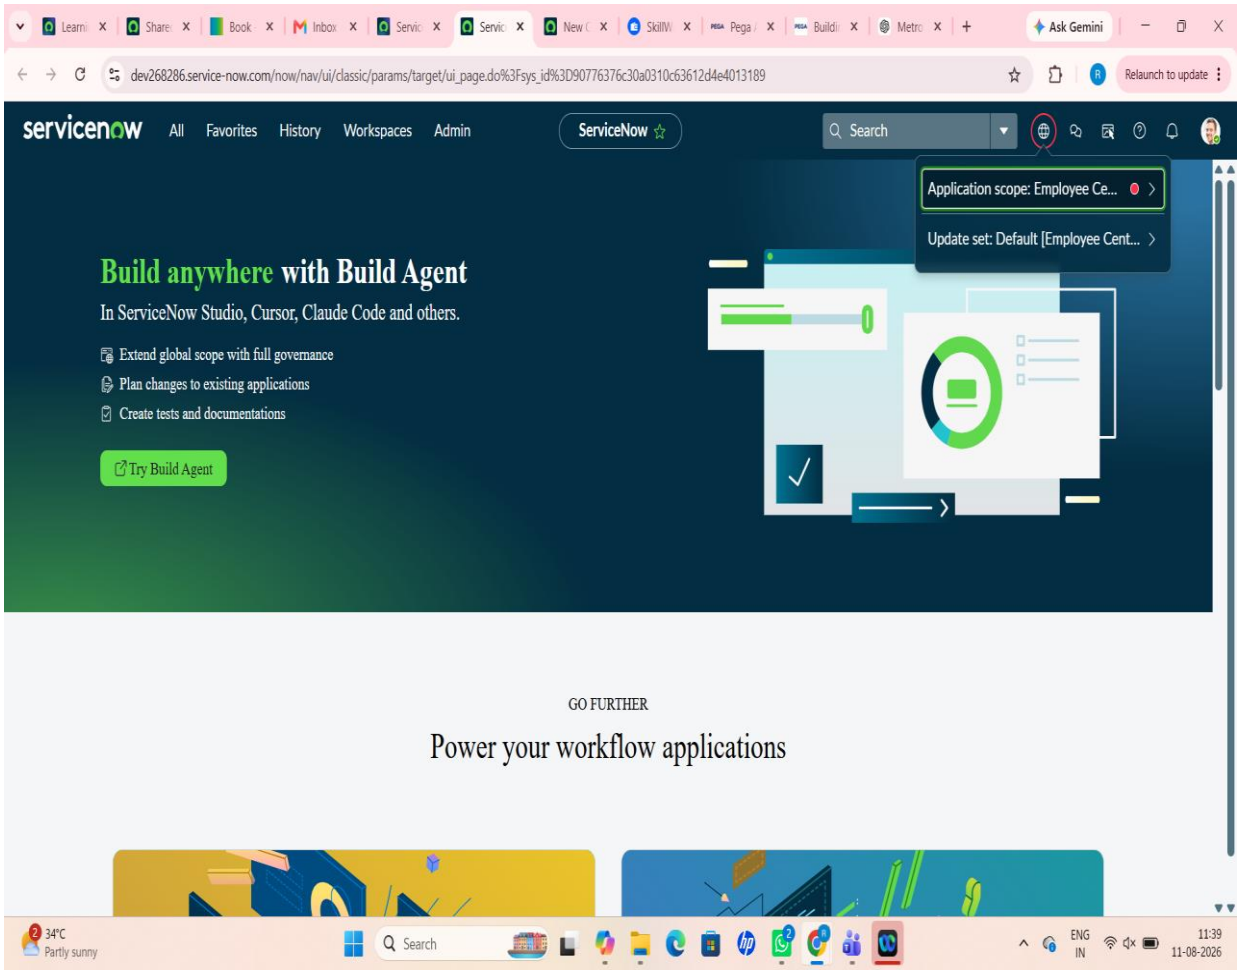

6. Click the **Profile Icon (Top Right Corner)** to manage your account, view your developer profile, and access instance-related options.

7. The Personal Developer Instance is then used to configure the **Employee Raise Issue Management** application, including employee issue submission, issue tracking, assignment, status updates, and resolution.

5. Implementation in ServiceNow

After the instance building is completed, the page will be directed to the **ServiceNow Creator Studio**. Creator Studio provides a guided, low-code/no-code environment to build applications quickly. For the **Employee Raise Issue Management in ServiceNow** project, it is used to create forms, tables, request items, and workflows for managing employee-raised issues.

5.1 Create a Custom Application

The first step in implementing the **Employee Raise Issue Management in ServiceNow** project is to create a custom application. The custom application provides a separate environment to develop and manage all the components required for the project.

Steps to Create the Custom Application

1.Log in to the ServiceNow Personal Developer Instance (PDI).

2.Navigate to **All menus**.

3. Search for **App Engine** in the Application Navigator.

4. Select **App Engine** and open **ServiceNow Studio**.

5. In ServiceNow Studio, click the **Create button**.

6. Select the **App** option to create a new application.

7. Enter the application name as:**Employee Center**

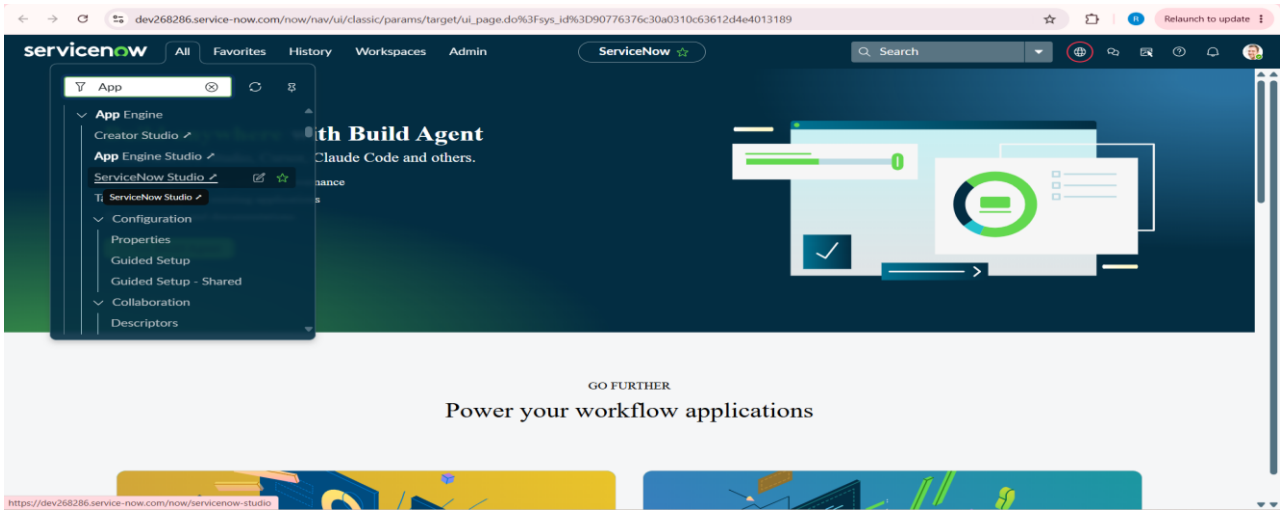

8. Select the application Scope as:**Scoped**

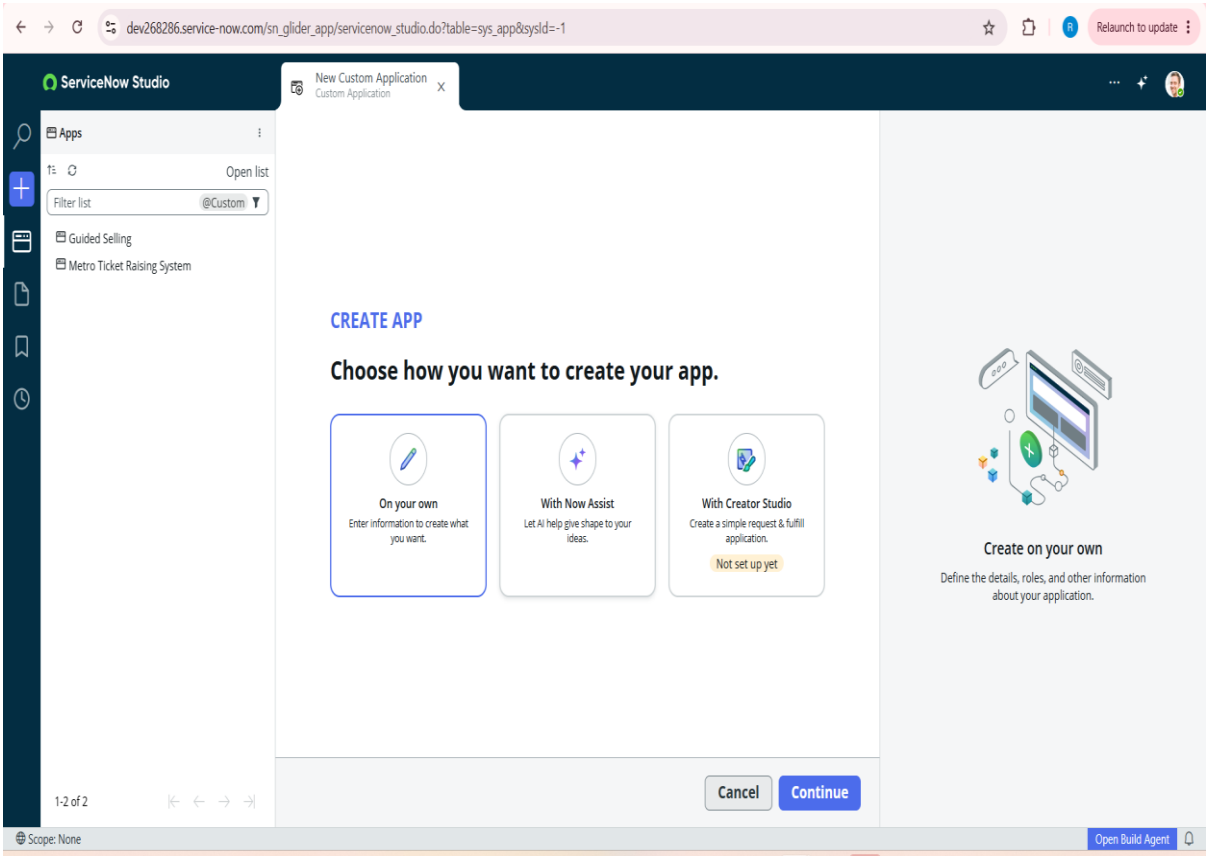

9. Click **Continue** to create the application.

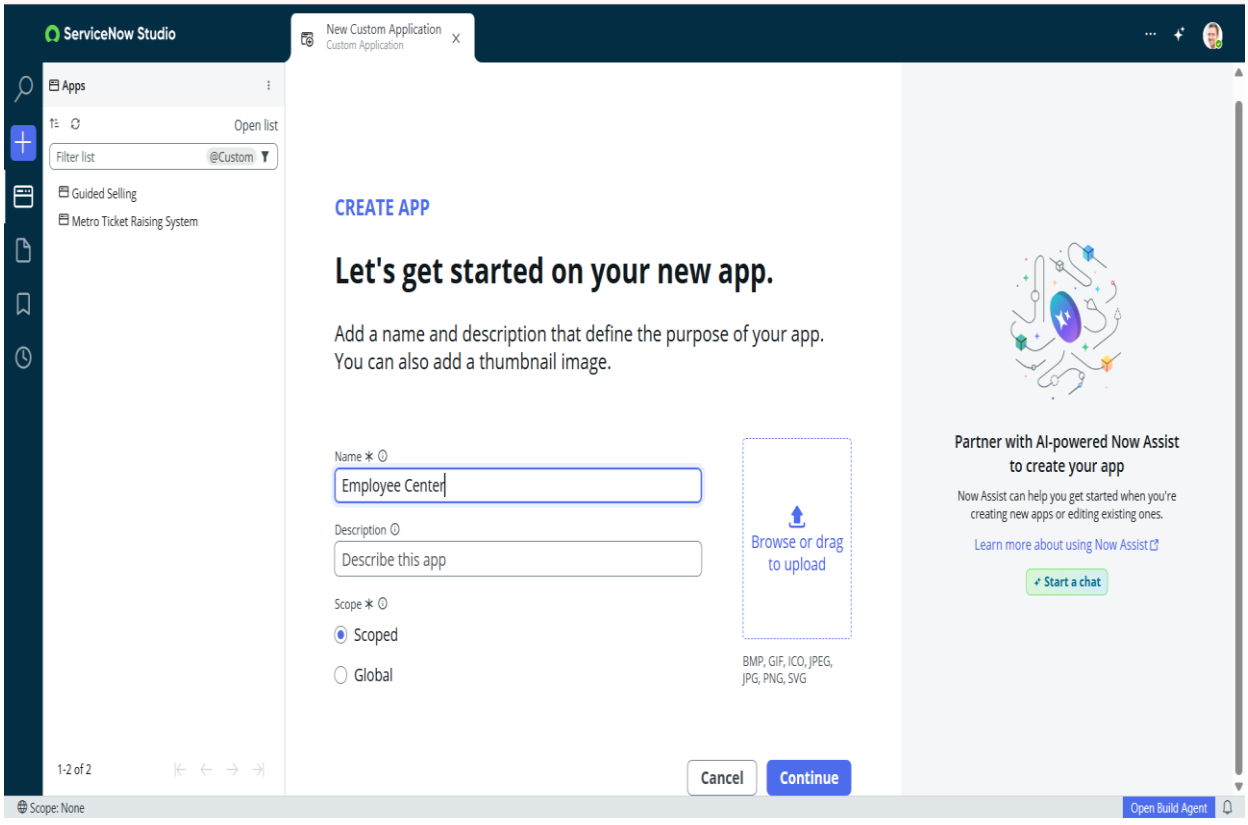

10.After the application is created, return to the ServiceNow Home page.

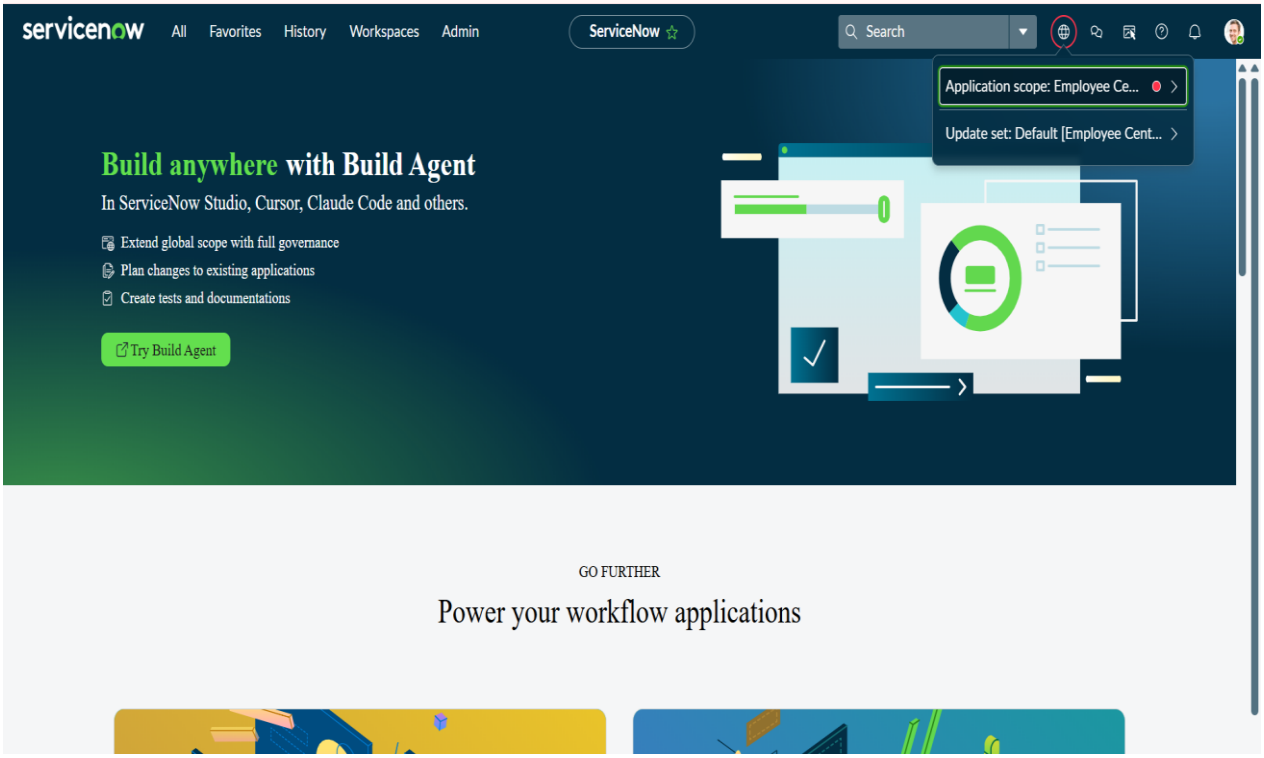

11.Reload the page to refresh the application list.

12.After reloading, the newly created application appears as the current application in the ServiceNow environment.

5.2 Create a Table and Fields

After creating the **Employee Center** custom application, the next step is to create a custom table for storing and managing employee-raised issue records.

The table provides the basic data structure for the **Employee Raise Issue Management** application. It stores important information about each issue, such as the issue number, short description, category, priority, description, employee details, assignment, and status.

Steps to Create the Employee Raise Issue Table

1. Navigate to **All** menus in the ServiceNow Application Navigator.

2.Search for **Tables**.

3.Under System Definition, select Tables.

4.Click the **New** button at the top-right corner to create a new table.

5.Enter the table Label as: **Employee Raises Issue**

6.The **Name** field is automatically populated by ServiceNow based on the table label.

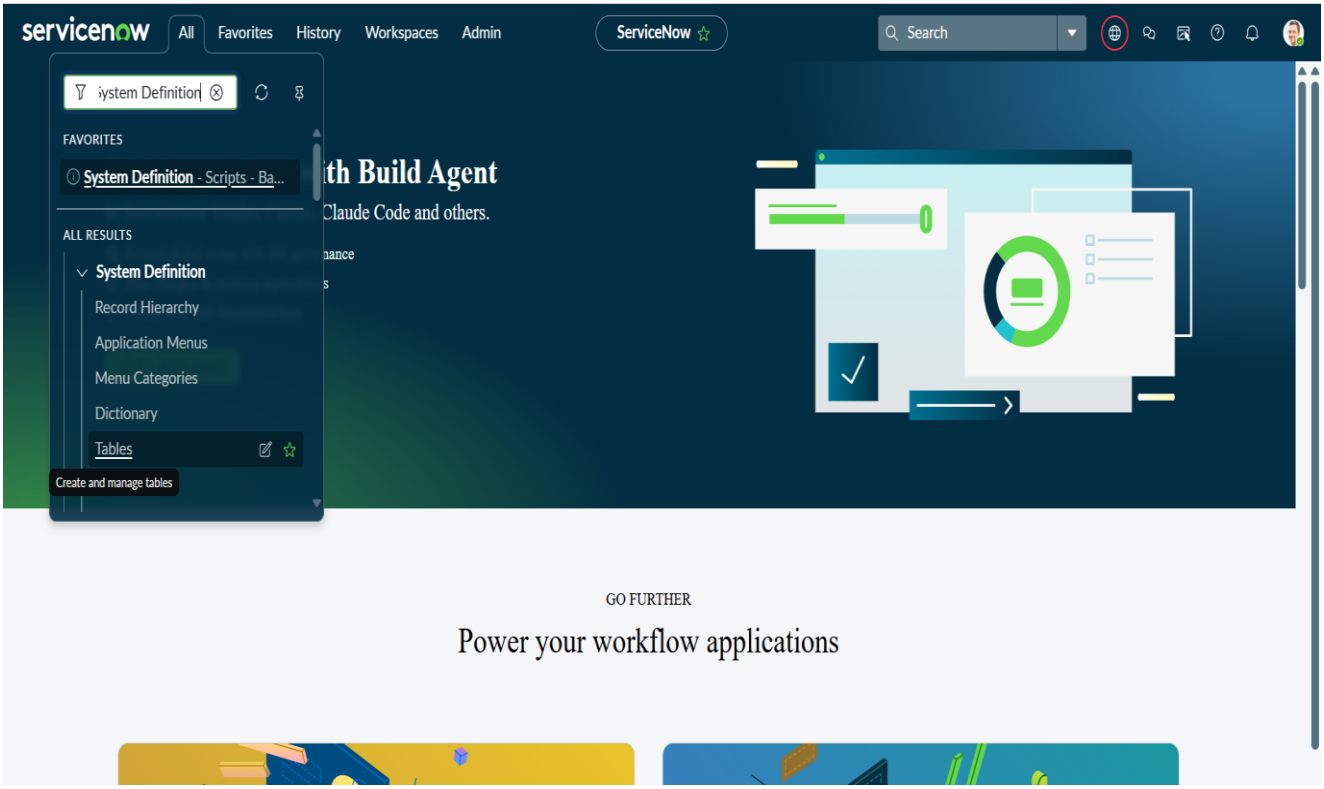

7.Under **Controls**, enable the **Auto number** option.

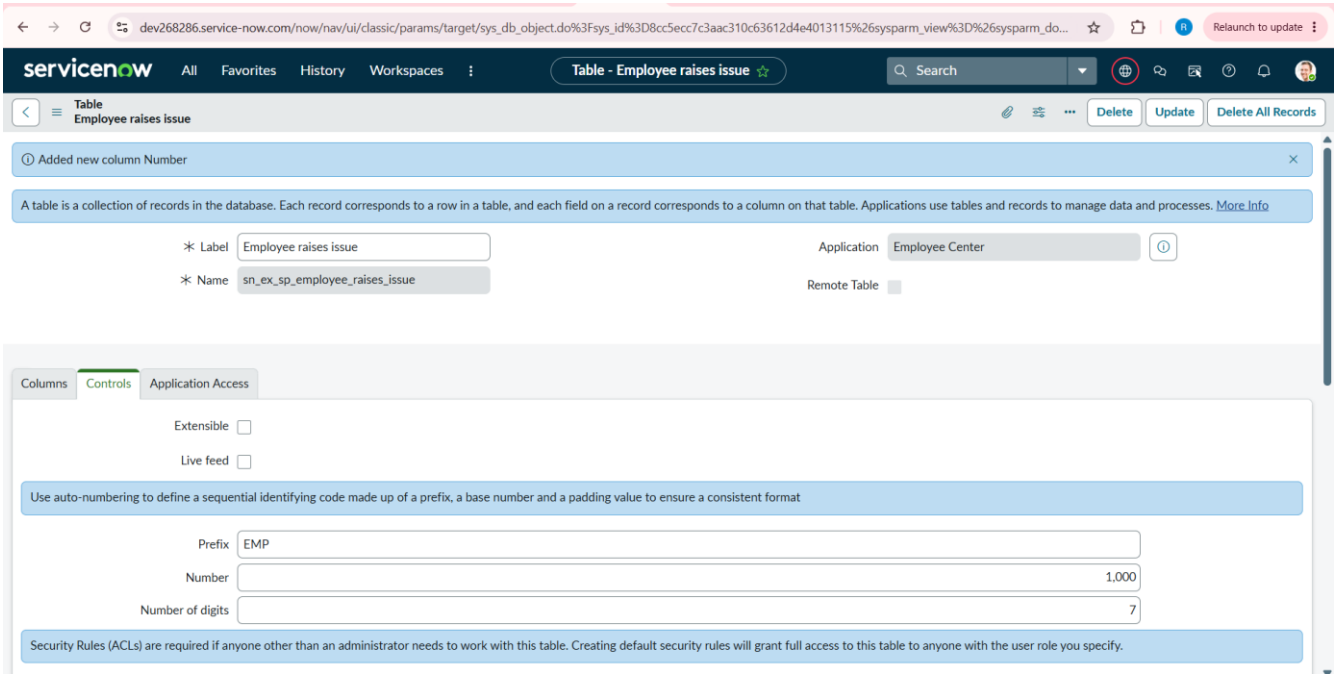

8.The Auto number feature automatically generates a unique number for every employee issue record. This helps users easily identify and track individual issues.

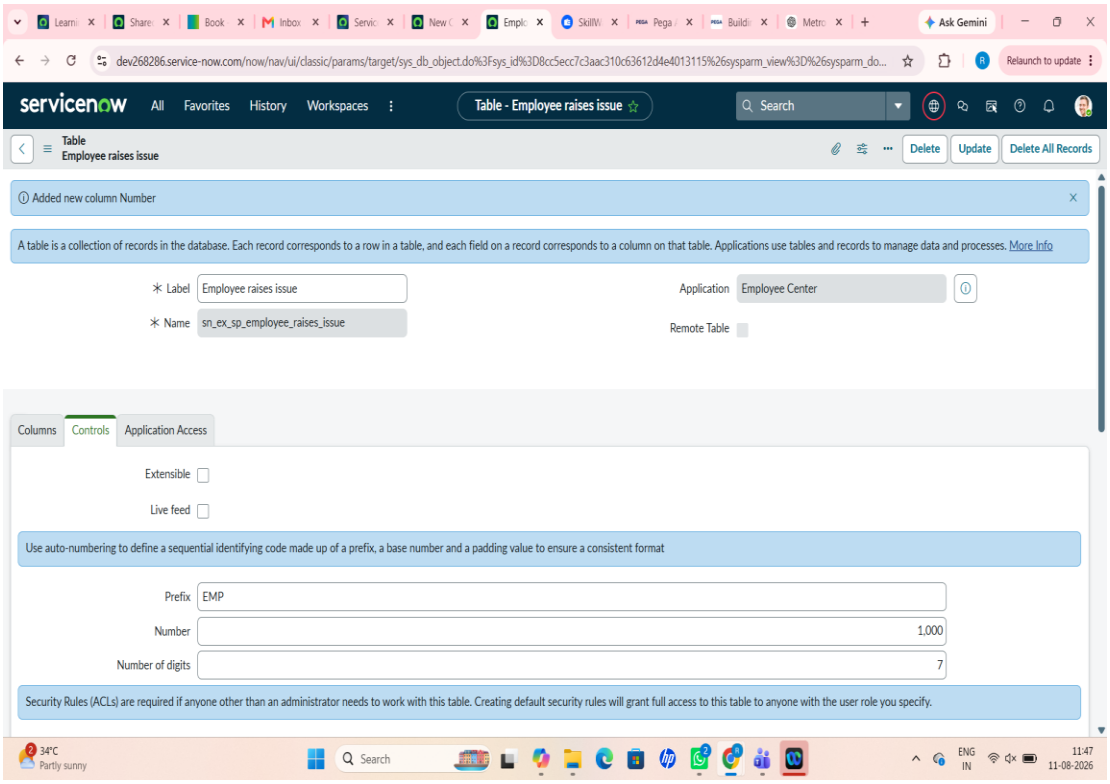

9.Configure the required table settings.

10.Save the table using the **Save** option from the context menu.

After saving, the **Employee Raises Issue** table is created successfully within the Employee Center application.

Configure the Form and Create Fields

After creating the table, the required fields are added to the table form.

1.Under **Related Links**, click **Show Form**.

2.Open the **Context Menu**.

3. Select **Configure → Form Design**.

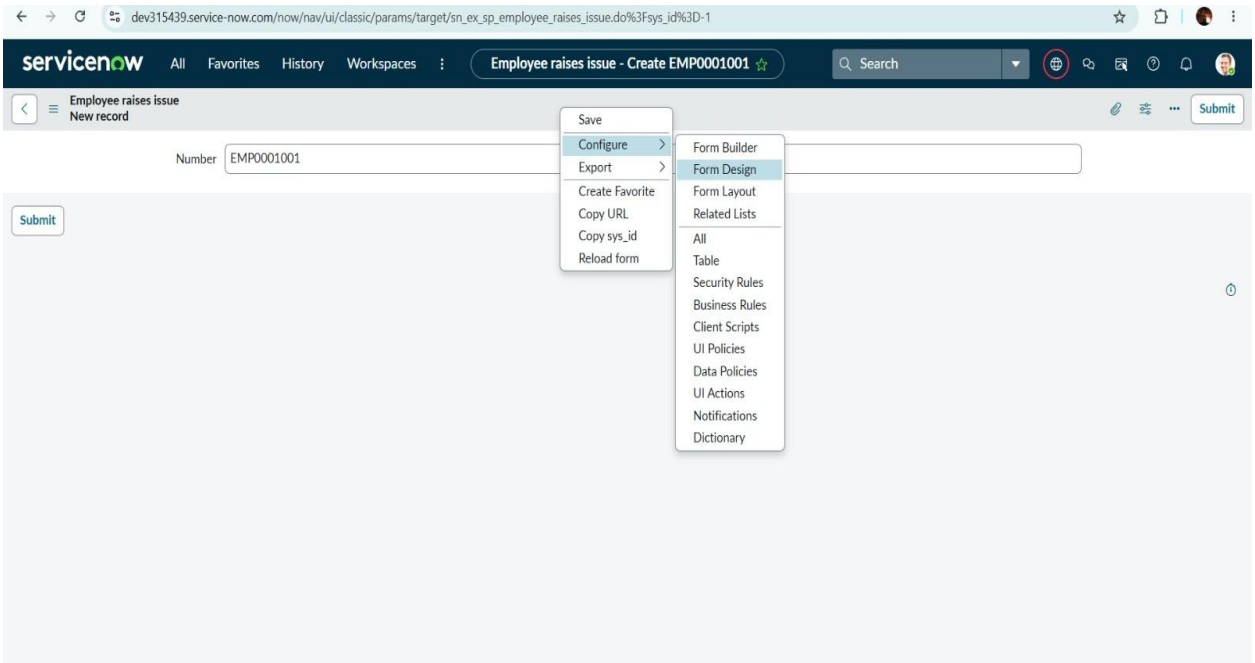

4. Create the required fields by selecting the appropriate **Field Label** and **Type**.

5. Add the fields to the form and arrange them according to the requirements of the Employee Raise Issue Management application.

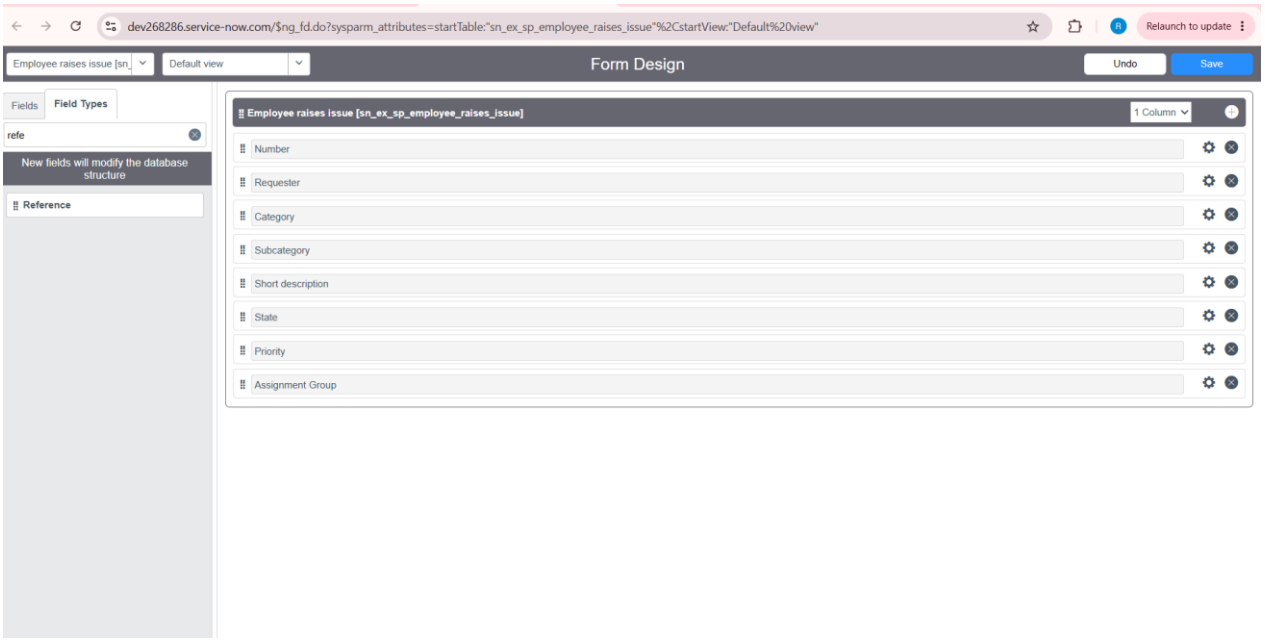

Fields Created

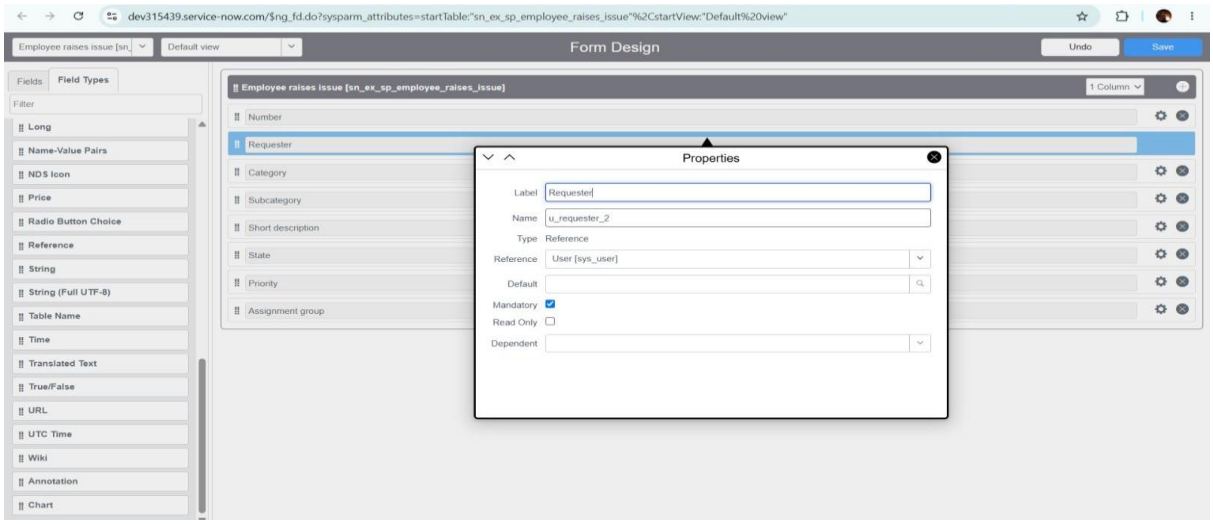

Field Label	Type	Notes
Number	Auto-Number	Automatically generates a unique number for each employee issue
Requester	Reference	References the sys_user table and identifies the employee who raised the issue
Category	Choice	Classifies the employee issue

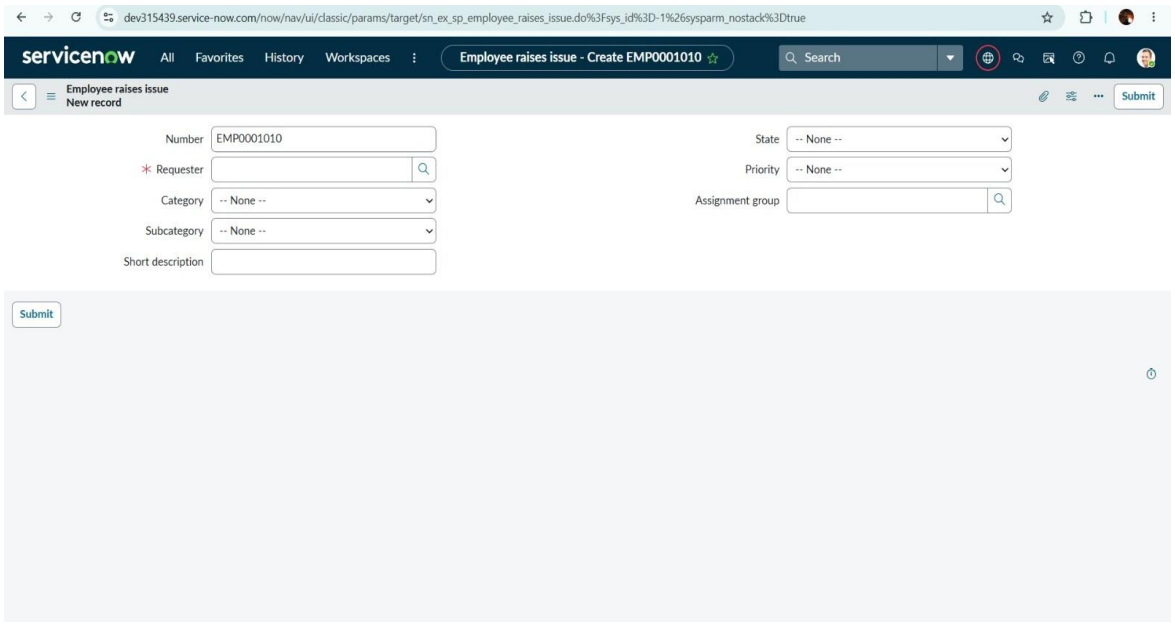

Subcategory	Choice	Provides a more specific classification of the issue
Short Description	String	Provides a brief summary of the employee issue
Description	String/HTML	Provides detailed information about the employee issue
State	Choice	Tracks the current status of the issue
Priority	Choice	Indicates the urgency of the issue
Assignment Group	Reference	References the **sys_user_group** table and identifies the responsible team
Assigned To	Reference	Identifies the user responsible for handling the issue

5.3 Creating UI Policies

A UI Policy in ServiceNow is used to dynamically control the behavior of fields on a form based on specific conditions. In the Employee Raise Issue Management

application, a UI Policy is created to make the Short Description field mandatory when the State of an employee issue is set to New.

Navigation Steps

1.Navigate to **All** menus in the ServiceNow Application Navigator.

2.Search for **UI Policies**.

3.Open UI Policies.

4.Click the **New** button in the top-right corner to create a new UI Policy.

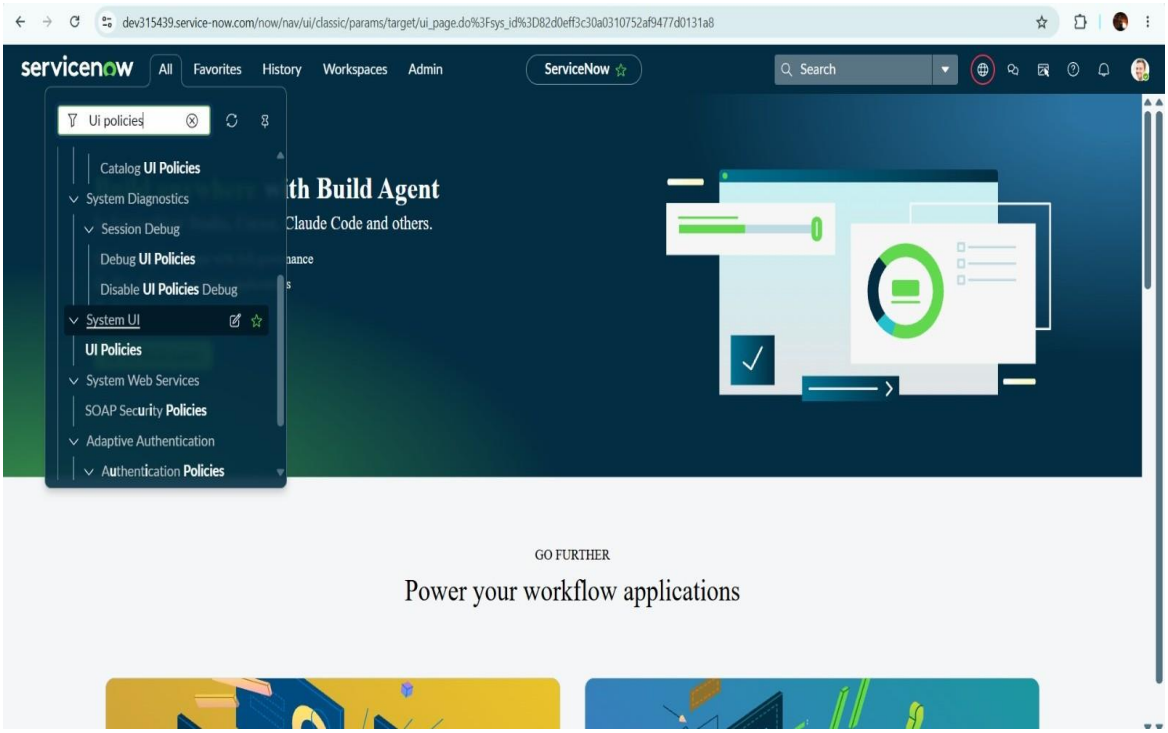

5.Select the table: **Employee Raises Issue**

6.Enter the Short Description as: **When the state changes to New, Short Description is mandatory.**

7.Under the Filter Conditions (When to Apply) section, configure the condition as:

State is New

8.**Save** the UI Policy.

Configure UI Policy Action

After saving the UI Policy, configure the UI Policy Action.

1. Under Related Links, locate the **UI Policy Actions** section.

2. Click **New.**

3. Select the field: **Short Description**

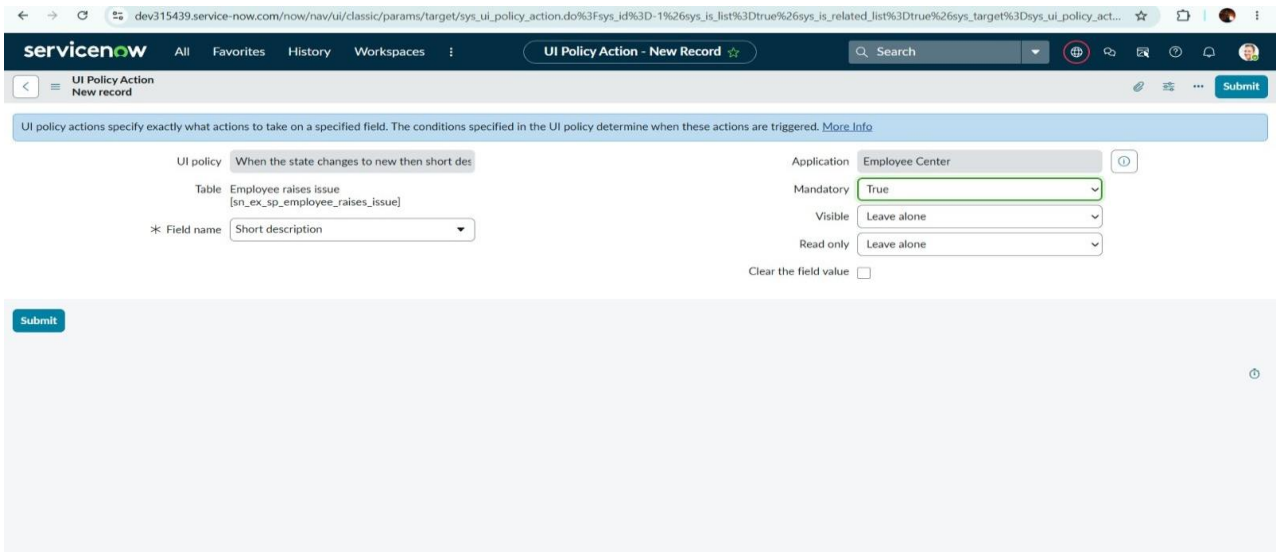

4. Set Mandatory to: **True**

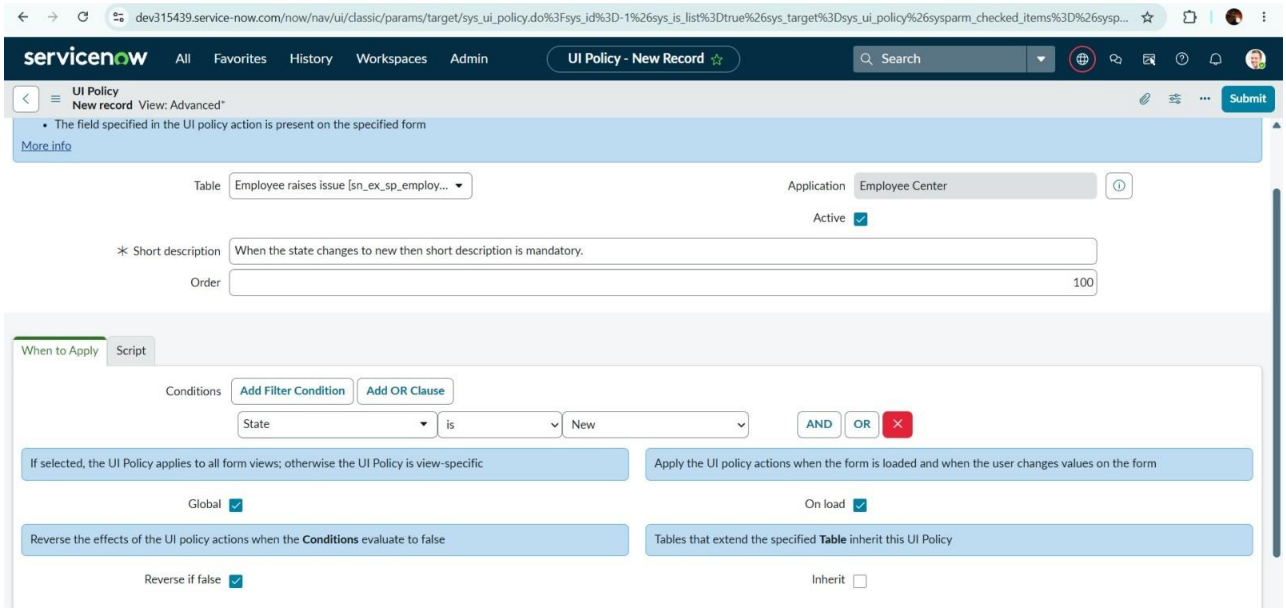

5. Keep Visible as: **Leave alone**

6. Keep Read Only as: **Leave alone**

7. Click **Submit** to **save** the UI Policy Action.

8. Open the UI Policy again and click **Update** to save the final configuration.

5.4 Creating Field Dependency

Field dependency is used in ServiceNow to display relevant Subcategory choices

based on the selected Category. In the **Employee Raise Issue Management application**, this helps employees select an appropriate subcategory for the issue they are raising.

Steps:

1.Open the **Employee Raises Issue table form**.

2.Locate the **Subcategory** field.

3.Right-click on the Subcategory field.

4.Select **Configure Dictionary**.

5.A new dictionary form will open.

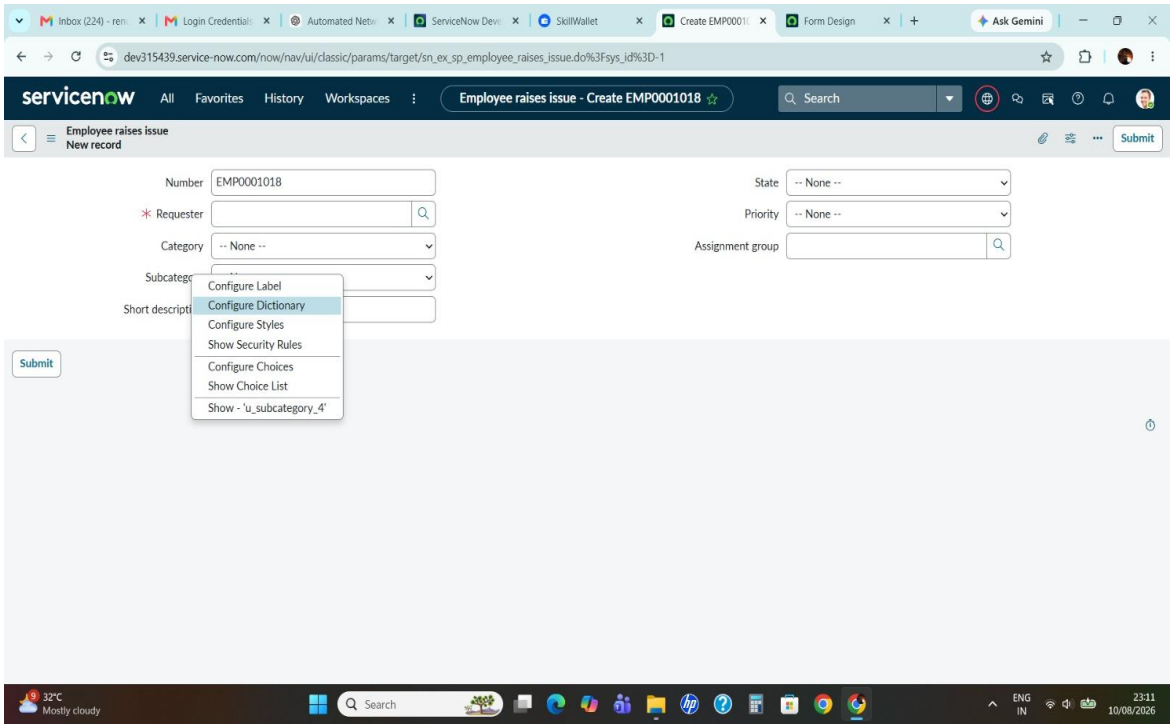

6.Under Related Links, select **Advanced View**.

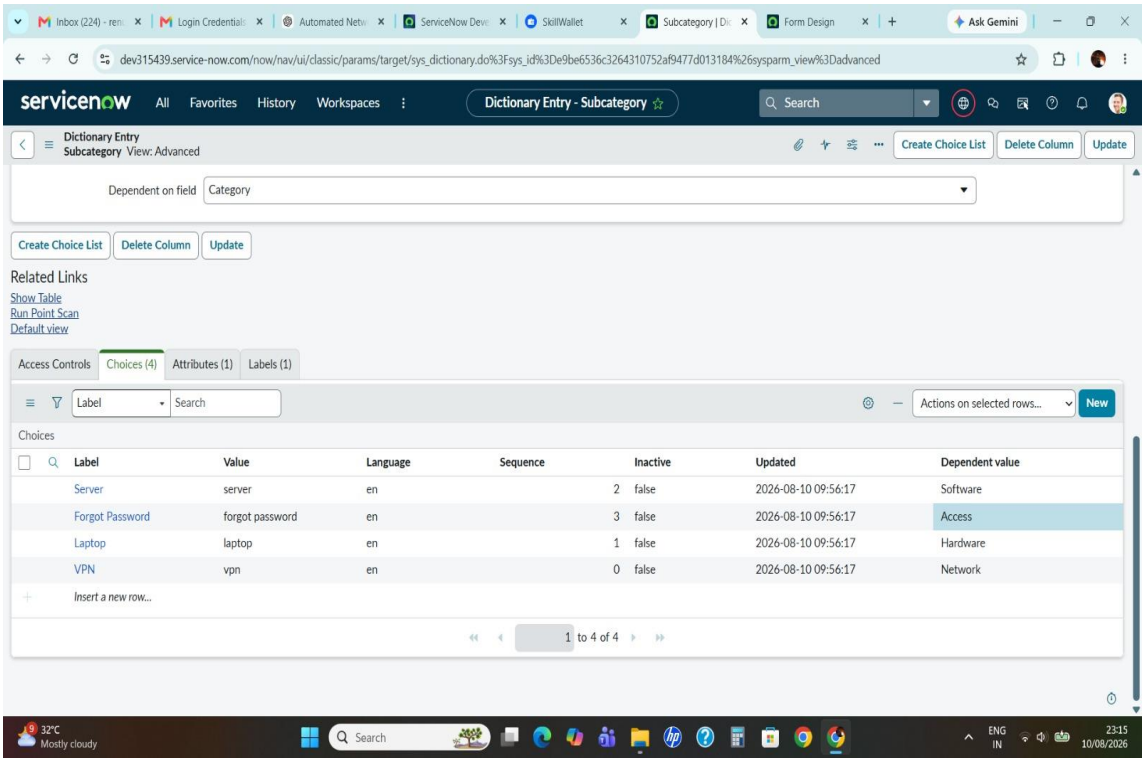

7. In the dictionary configuration, set the Dependent field as: **Category**

8.Under Related Links, select the **Choices** section.

9.Configure the choice values for the Subcategory field using the appropriate backend values of the Category field.

10.Define the dependency between Category and Subcategory.

5.5 Creating a Record Producer

A Record Producer allows employees to submit an issue through the Service Catalog. The submitted information is stored in the Employee Raises Issue table.

Steps:

1.Navigate to **All → Service Catalog → Catalog Definition → Record Producers**.

2. Click **New**.

3. Enter **Name:** Raise Employee Issue.

4. Select **Table:** Employee Raises Issue.

5. In **What it will contain**, enter:
Allows employees to raise and submit their issues through the Service Catalog.

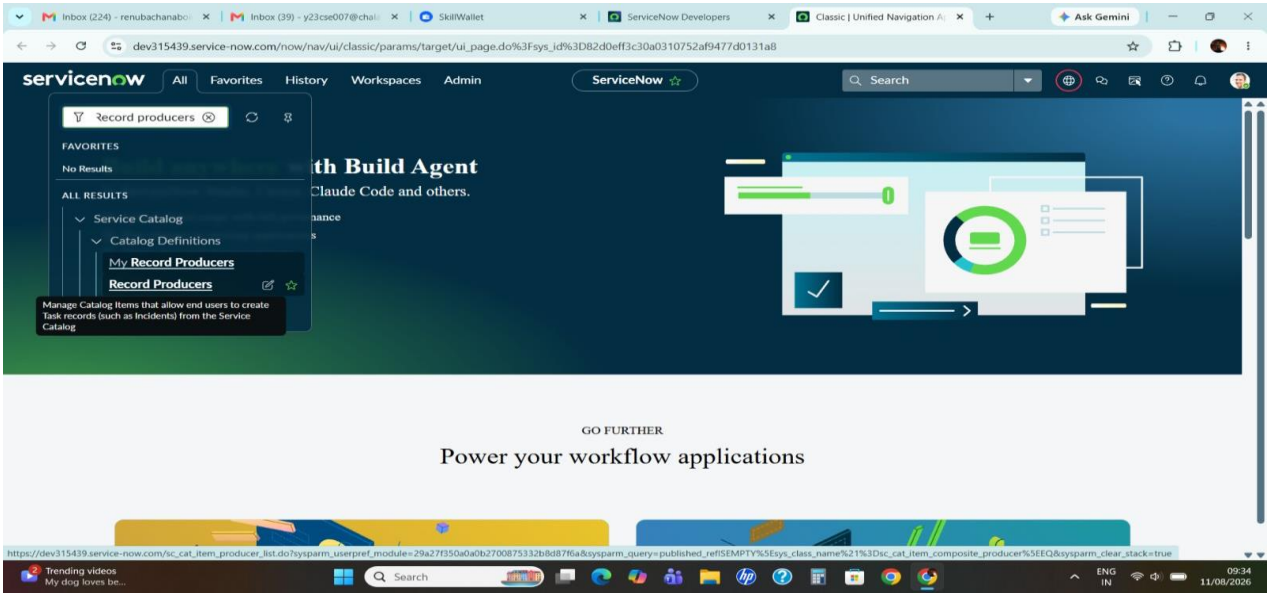

6. Under **Accessibility**, select:

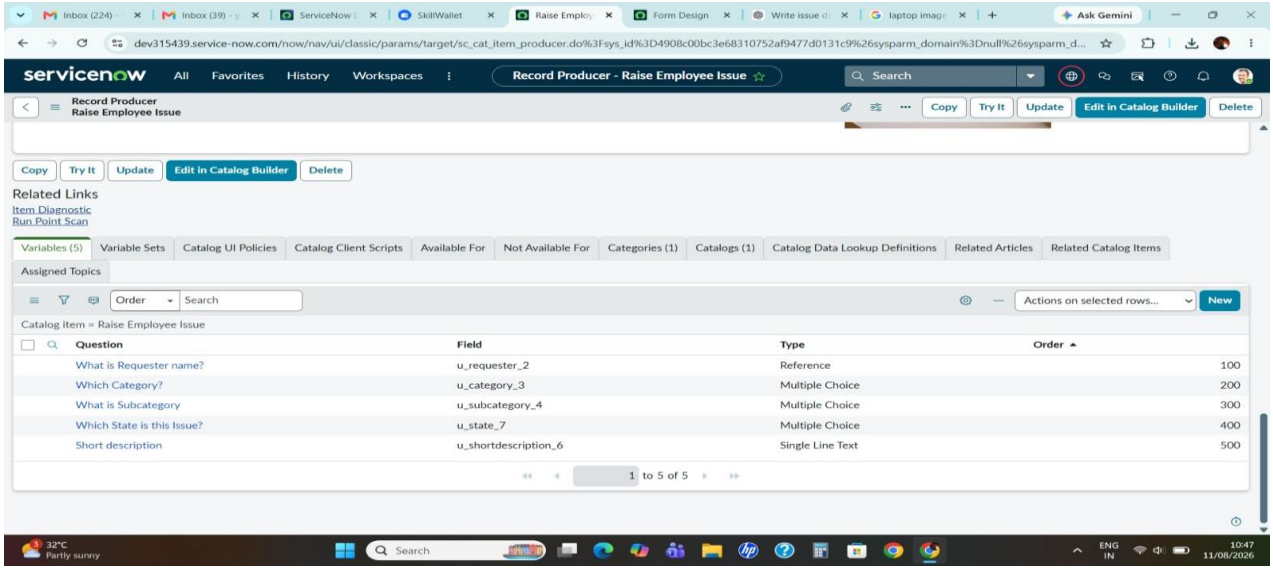

- **Catalog:** Service Catalog
- **Category:** Service
- **Picture:** Add a suitable image.

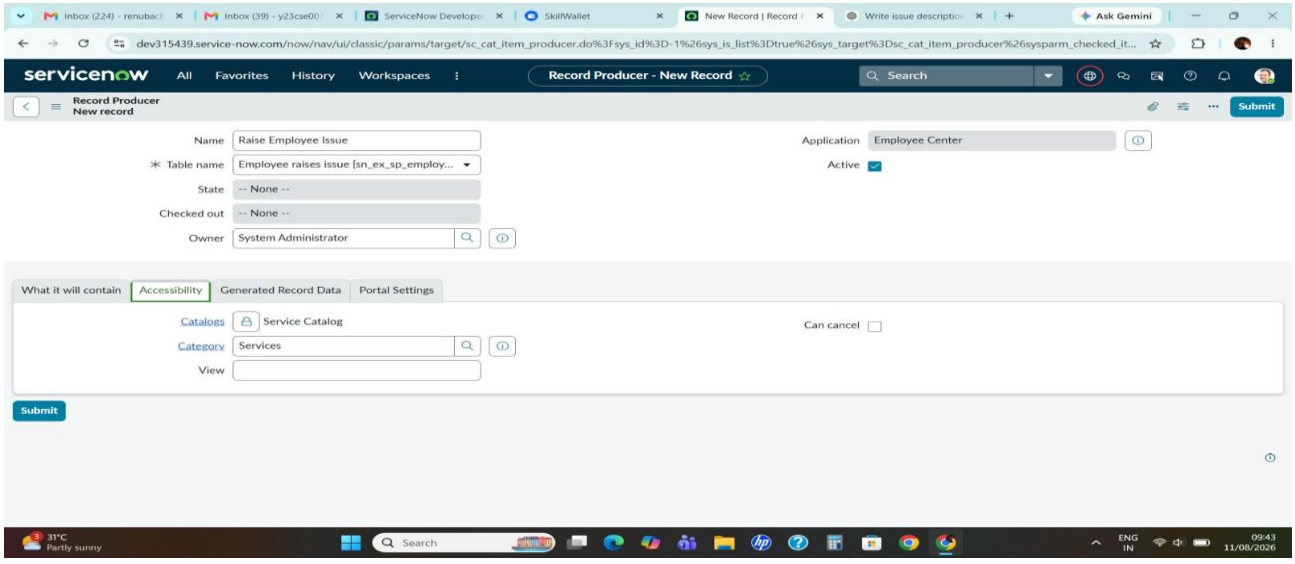

7.Save the form.

8.Under **Related Links → Variables**, click **New**.

9.Create the required variables, enable **Map to Field**, select the corresponding table field, and assign orders such as **100, 200, 300...**

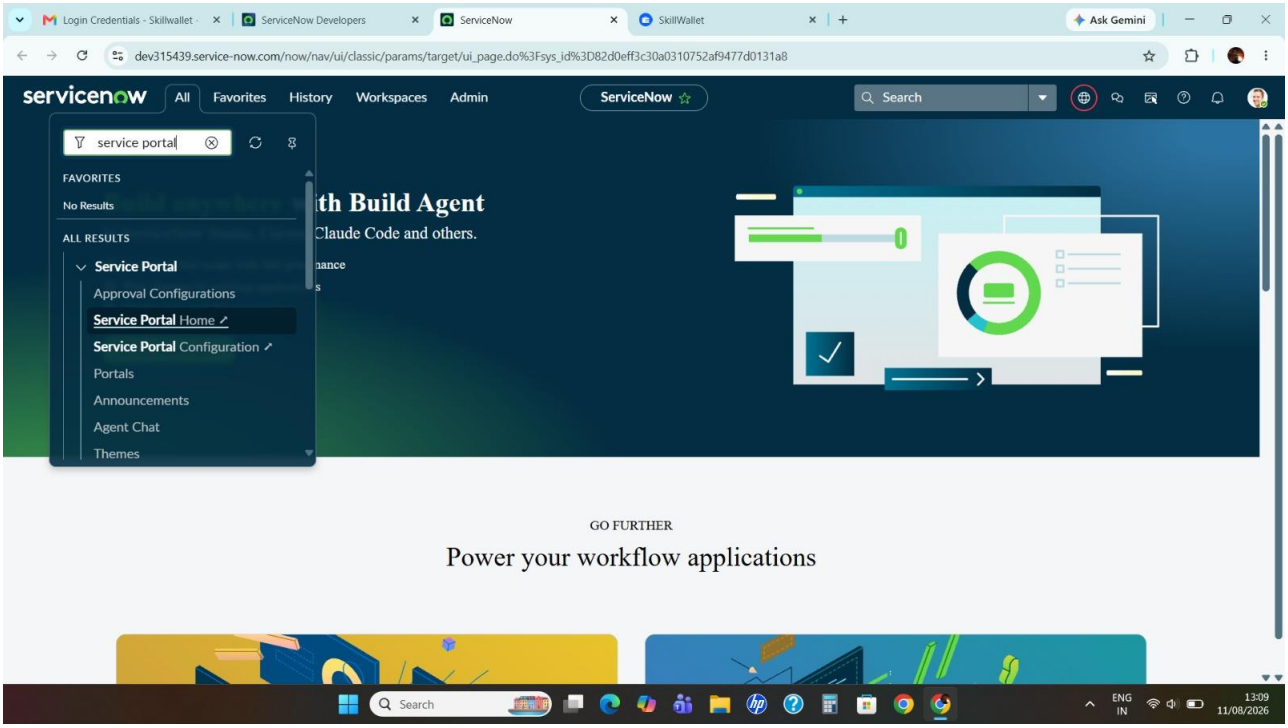

5.6 Creating a New Service Portal

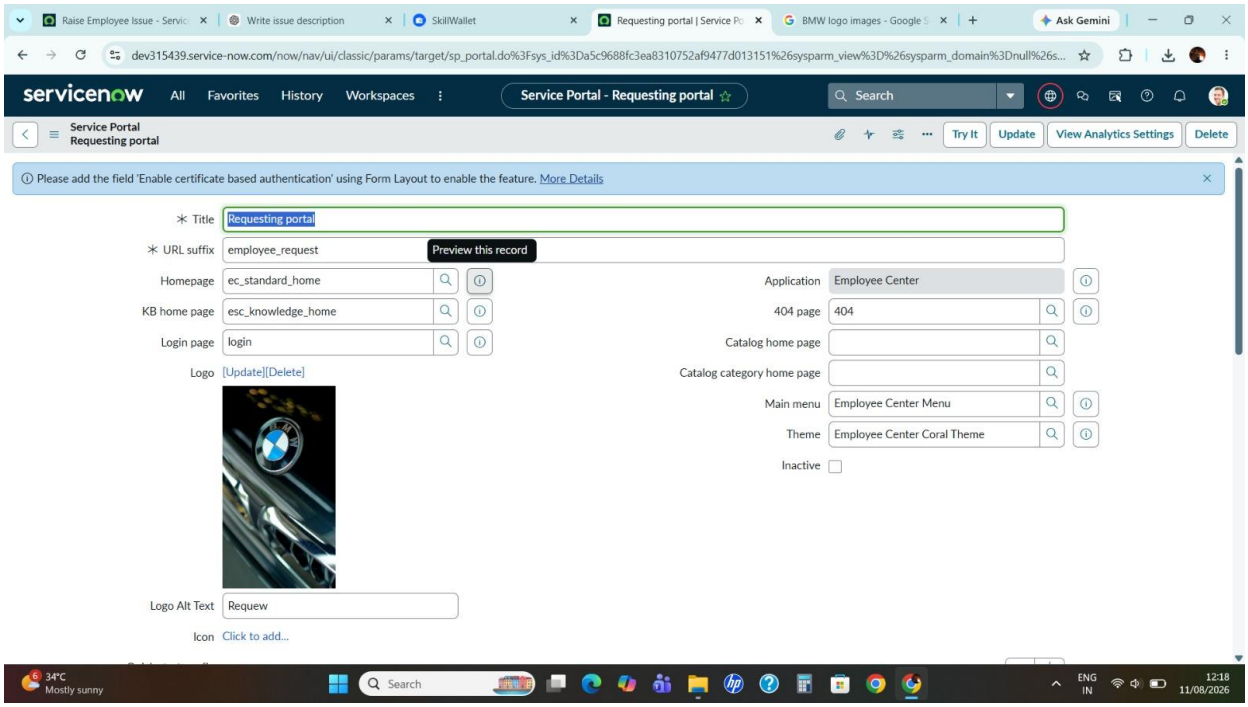

A Service Portal provides a user-friendly interface through which employees can access the **Employee Raise Issue** application and submit their issues.

Steps:

1. Navigate to **Service Portal → Service Portal Configuration**.
2. Click **New** to create a new portal.
3. Enter the following details:

Field	Value
Title	Requesting Portal
URL Suffix	employee_request
Homepage	ec_standard_home
KB Home Page	esc_knowledge_home
Login Page	login
Logo	Upload suitable image
Main Menu	Employee Center Menu
404 Page	404
Theme	Employee Center Coral Theme

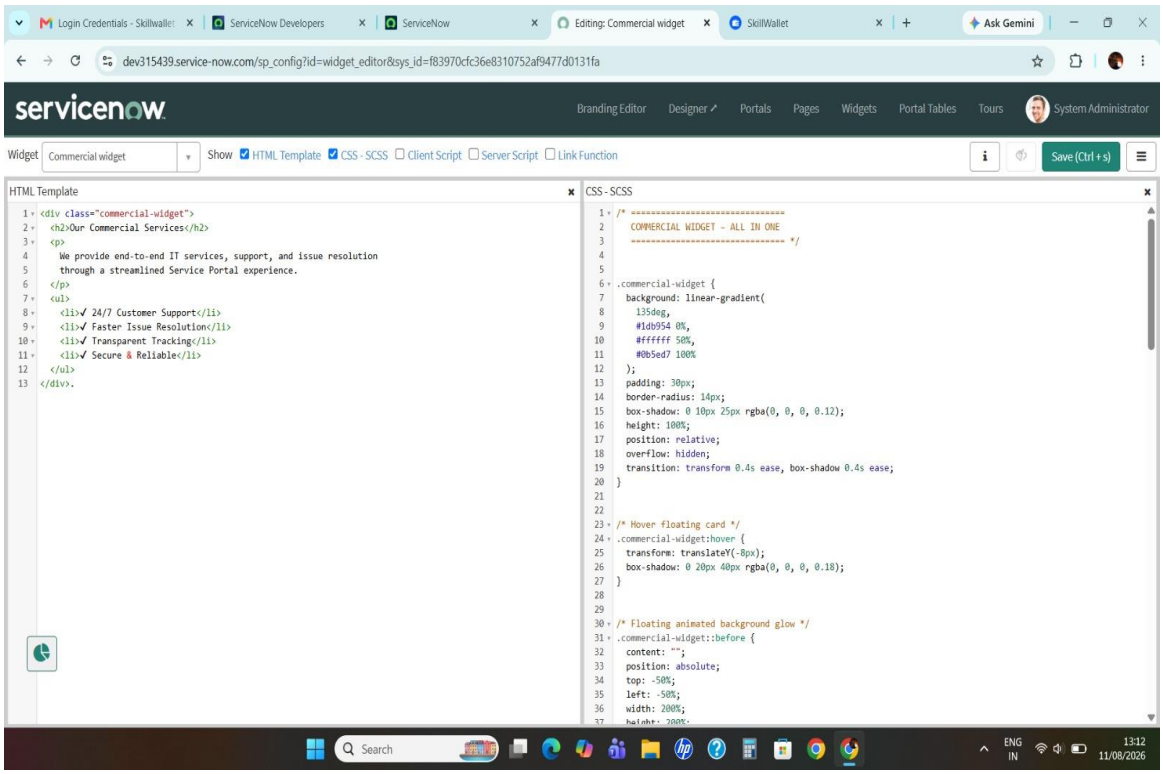

5.7 Left Widget Creation

A custom widget is created to enhance the appearance and interaction of the Center Portal.

Steps:

1. Navigate to Service Portal Configuration → Service Portals.
2. Open Widget Editor.
3. Click Create a New Widget.
4. Enter the widget name as Commercial Widget.
5. Click Submit.
6. Configure the widget using HTML and CSS.
7. Enable the required templates and use the Eye icon to preview the widget.
8. The widget uses floating text and cursor-based movement for an interactive interface.

Result: The Commercial Widget is successfully created for the Employee Center Portal.

5.8 Right Widget Creation

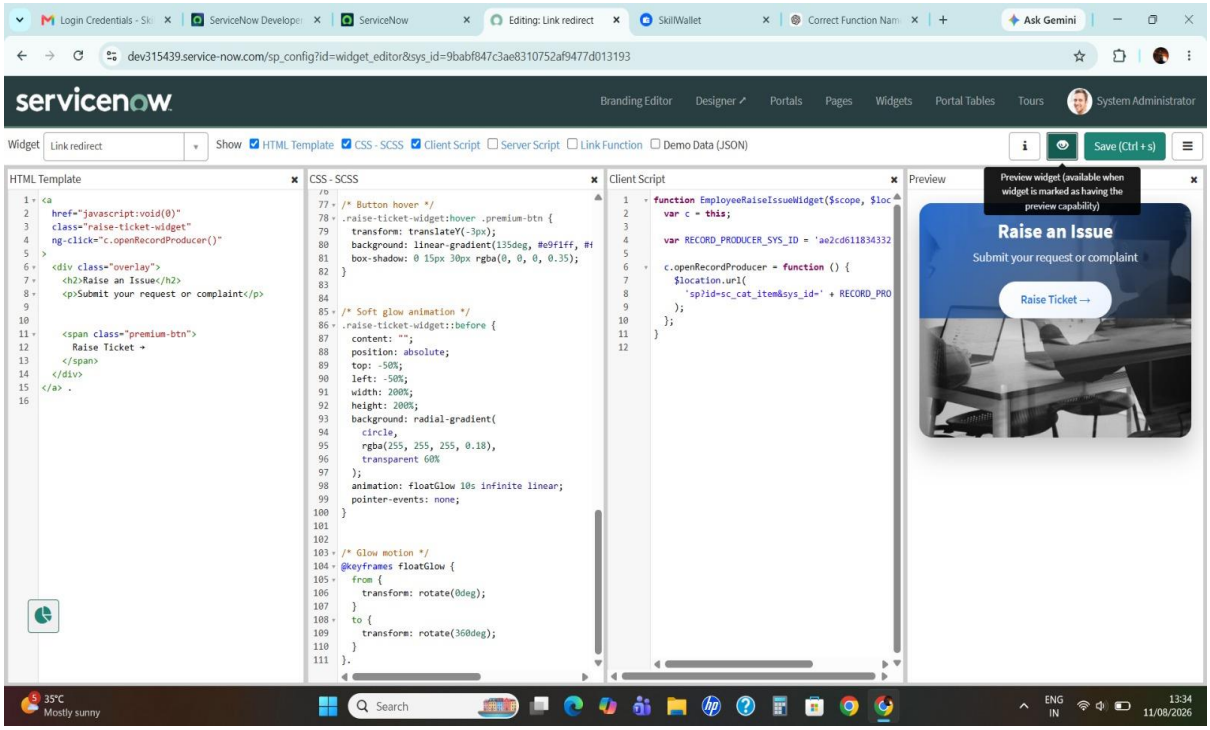

A custom **Link Redirect** widget is created to provide quick access to the **Raise Employee Issue** Record Producer from the Employee Center Portal.

Steps:

1. Navigate to Service Portal Configuration → Service Portals.
2. Open Widget Editor.
3. Click Create a New Widget.
4. Enter the widget name as Link Redirect.
5. Click Submit.
6. Configure the widget using HTML, CSS, and Client Script.
7. Use the Client Script to redirect users to the Record Producer using its sys_id.
8. Enable the required templates and use the Eye icon to preview the widget.

9.The widget is designed with floating text and cursor-based effects for an interactive interface.

Result: The **Link Redirect** widget is successfully created to redirect employees to the issue-raising page.

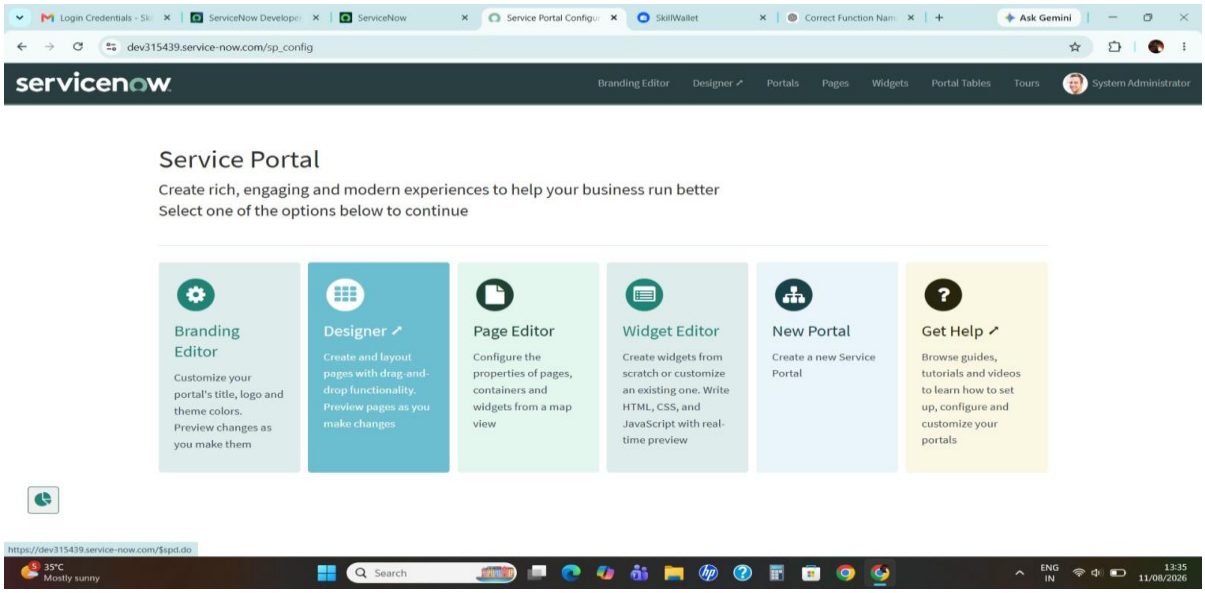

5.9 Adding Two Widgets to the Page

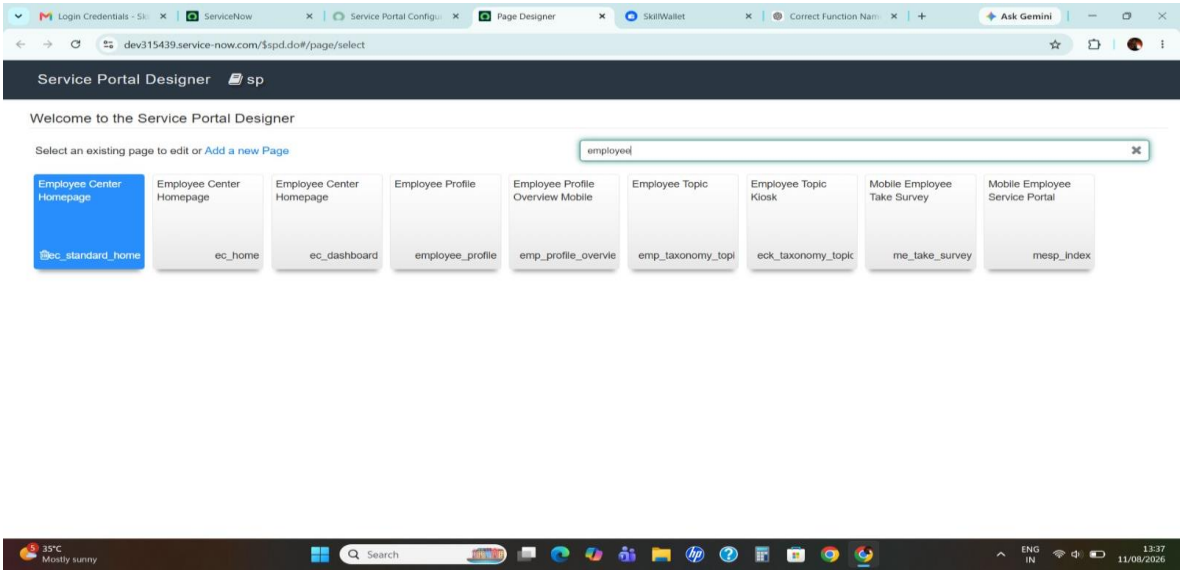

The Commercial Widget and Link Redirect Widget are added to the existing Employee Center Portal Page to provide an interactive and user-friendly interface.

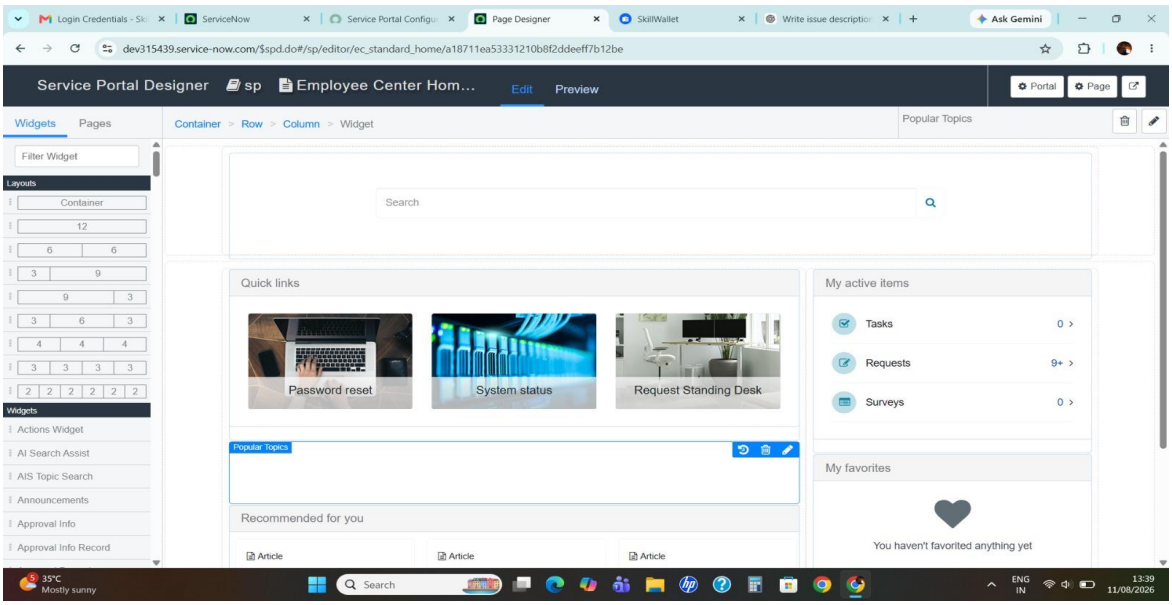

Steps:

1. Navigate to Service Portal Configuration → Service Portal.
2. Open Designer.
3. Search for and select the Employee Center Portal Page.
4. Create a 6 × 6 container.
5. Search for the required widgets.
6. Drag and drop the Commercial Widget and Link Redirect Widget onto the required sides of the container.
7. Arrange the widgets according to the desired page layout.

Result: Both widgets are successfully added to the Employee Center Portal Page.

5.10 Testing and Validation

The Employee Raise Issue Management application was tested through the Service Portal to verify that the configured widgets, Record Producer, UI Policies, and field dependencies work correctly.

Testing Steps:

1.Open a new browser tab and enter the Service Portal URL.

2.Verify that the configured image and icon are displayed.

3. Scroll down and verify that the Commercial Widget and Link Redirect Widget are displayed.

4.Move the cursor over the widgets and verify the configured floating effects.

5. Click the Raise Employee Issue link.

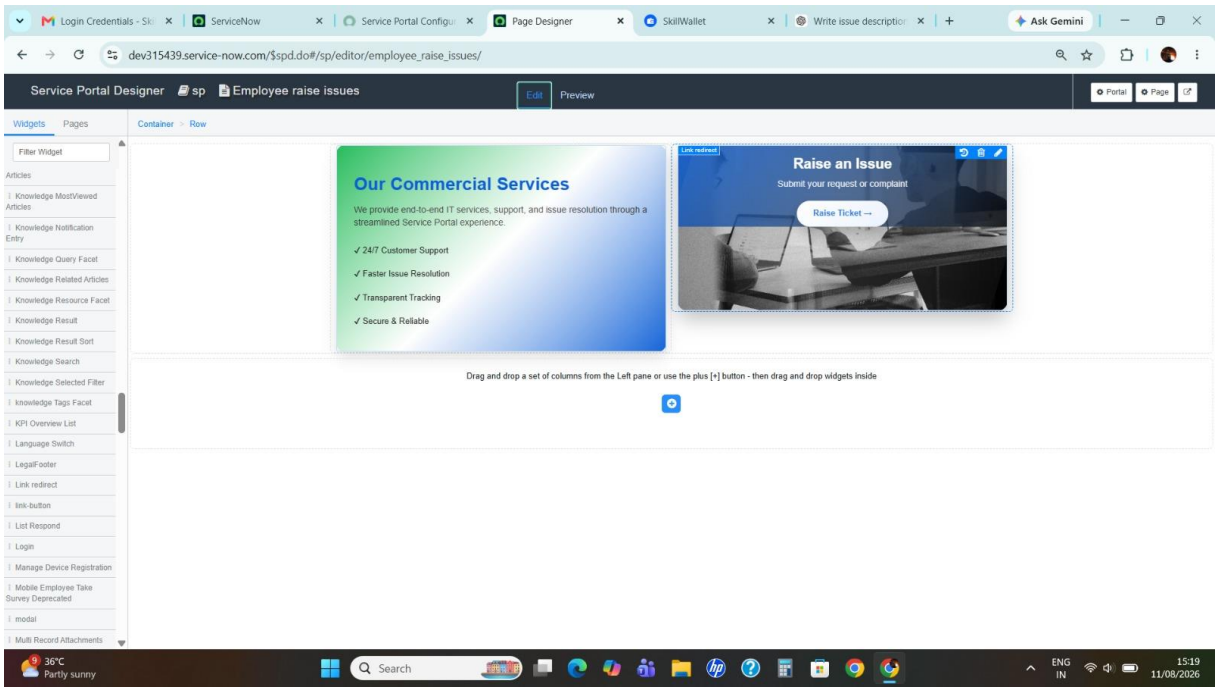

6.Verify that the Record Producer opens with the required employee and issue fields.

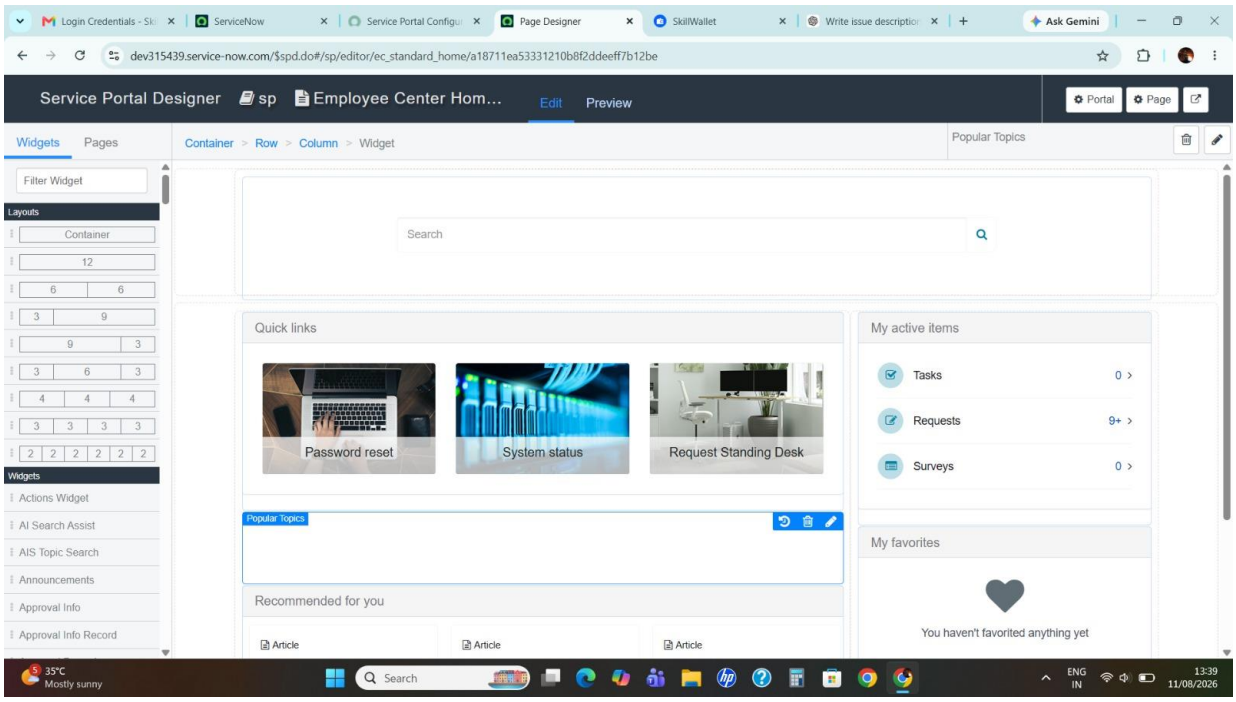

7.Enter the required details and click Submit.

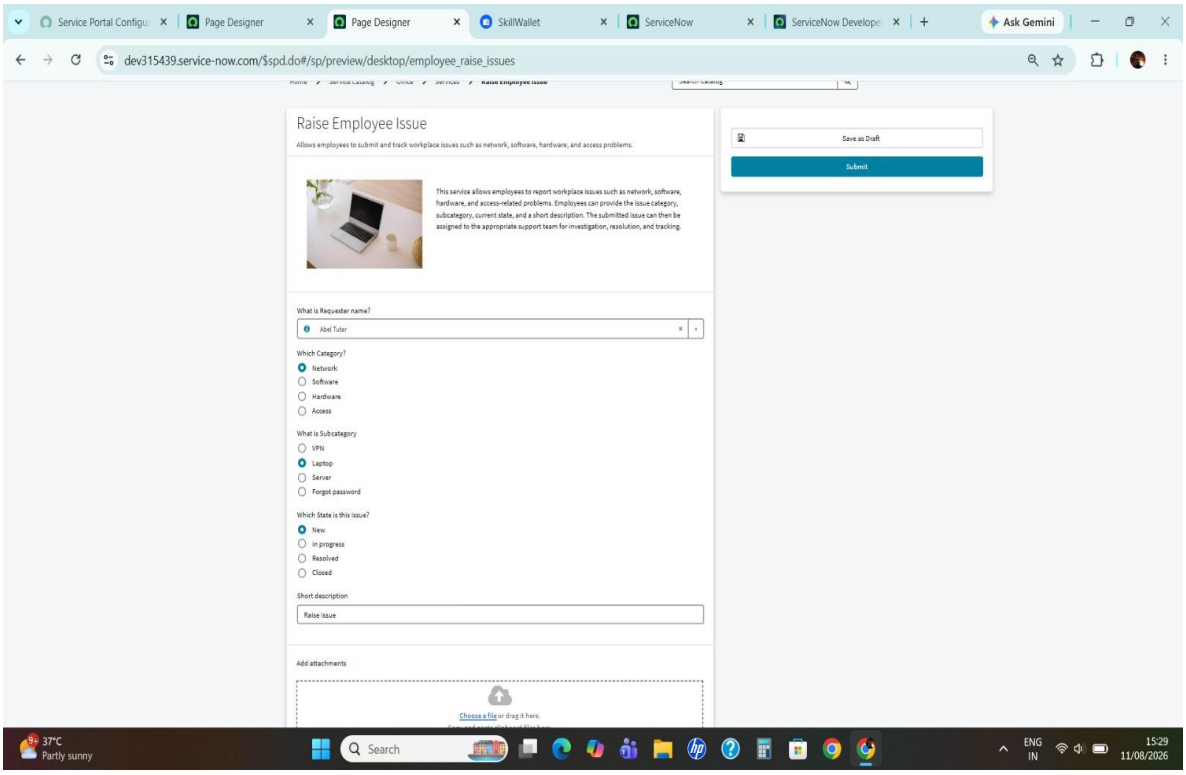

8.Verify that the employee issue record is successfully created.

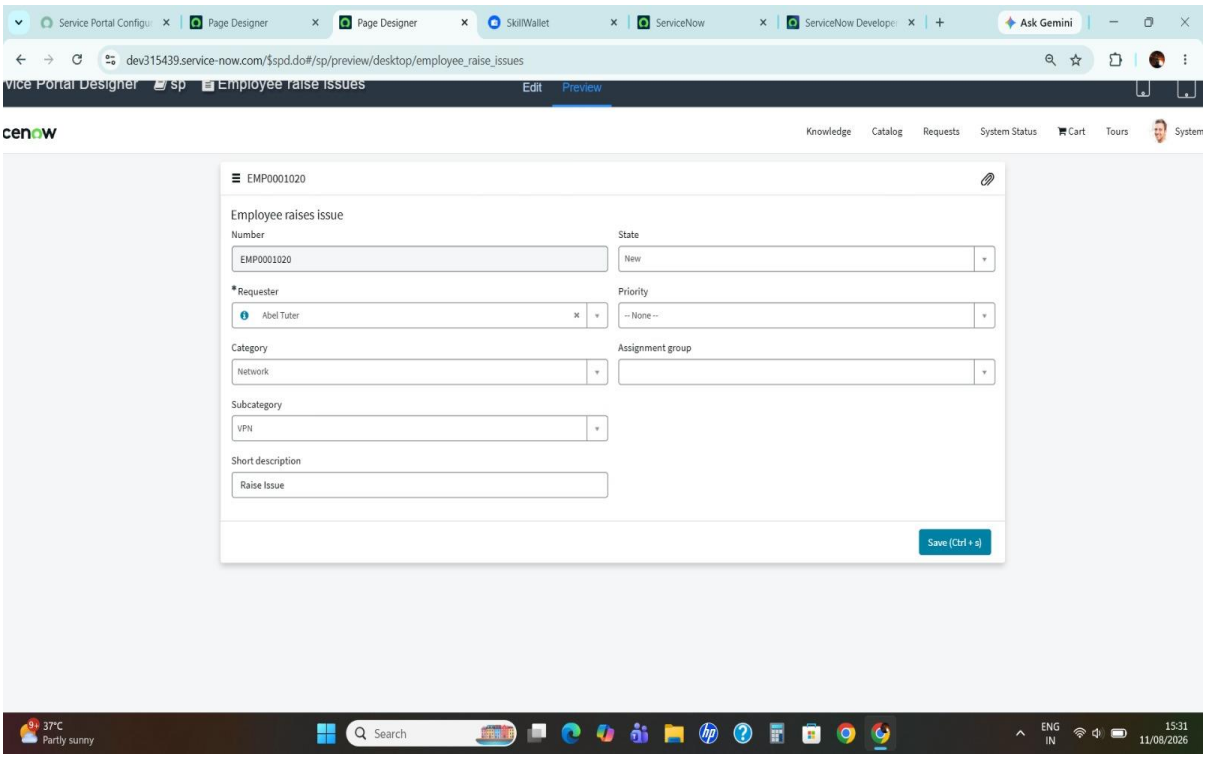

9.heck the UI Policy behavior and verify that the required fields become mandatory based on the configured conditions.

10.Verify the Category–Subcategory dependency and confirm that the appropriate subcategory is displayed based on the selected category.

Raise Employee Issue
Allows employees to submit and track workplace issues such as network, software, hardware, and access problems.
Save as Draft
Submit
This service allows employees to report workplace issues such as network, software, hardware, and access-related problems. Employees can provide the issue category, subcategory, current state, and a short description. The submitted issue can then be assigned to the appropriate support team for investigation, resolution, and tracking.

6. Conclusion

The Employee Raise Issue Management in ServiceNow application was successfully implemented using a custom scoped application, custom table and fields, UI Policies, field dependencies, Record Producer, Service Portal, and custom widgets.

The solution provides:

- Standardized employee issue submission
- Mandatory field validation using UI Policies
- Controlled Category and Subcategory selection
- Easy issue submission through the Service Portal
- Automatic creation of backend issue records
